Dear P3,

This letter expresses my interest in the Front-End Developer position at your company. With an Associates Degree in Computer Science, graduating with honors, and the experience I've procured in my current professional workplace, I feel the position available would be both a great fit for me, but also P3.

I started as an intern at my current company and worked my way up the ranks, being promoted multiple times based solely on merit, and my yearn to learn and challenge myself in the technology space. I have learned so much over my last 3 years of Software Development experience and can't wait to continue learning and challenging myself in the future with your company.

Your listed requires I feel match closely with my background and skills, a few I would like to highlight are:

- Comfortability using Linux and Microsoft systems, as I do extensive DevOps work in my current position
- Developing production applications using various HTML/JavaScript frameworks such as the latest version of Angular and jQuery
- Taking on technical lead for multiple projects, where I make decisions on what frameworks and technologies to use, along with writing technical requirement documentation for our developers to follow feature implementation
- Building full RESTful APIs and Database models, and AWS cloudformation scripting with DevOps to ensure the most robust system architecture

Thank you for your time and consideration. I look forward to speaking with you about this opportunity.

Sincerely,

Software Engineer at Barefoot Solutions, Alexander Vaughan
